SANJU LAL S S

Senior Software Engineer | Backend & DevOps

Thiruvananthapuram, Kerala 695011 | +91 8921268523 | sanjusanjulalss@gmail.com | linkedin.com/in/sanju-lal-s-s-13745a189

PROFESSIONAL SUMMARY

Senior Software Engineer with 4.5+ years of experience designing, building, and supporting backend applications and cloud-based product deployments. Proficient in Python (FastAPI), C#/.NET/.NET Core, RESTful and microservice architecture, and CI/CD automation using Jenkins and AWS (ECS, EC2, Lambda, S3). Proven track record resolving critical production issues, reducing manual effort through automation and GenAI-assisted tooling, and ensuring reliable, scalable software delivery under tight deadlines. Strong background in SDLC, multi-tenant system design, and database management (MySQL, MongoDB).

CORE SKILLS

Languages & Frameworks: Python (3.8–3.13), FastAPI, C#, .NET Framework (4.5–4.8), .NET Core 3.1, .NET 6, ASP.NET

Cloud & DevOps: AWS (ECS, EC2, Lambda, S3), Jenkins, CI/CD Pipelines, Docker, IIS, Rack Deployment

Databases: MySQL, MongoDB

Architecture & Practices: RESTful APIs, Microservices, Windows Services, Multi-Tenant Architecture, SDLC, Clean Code & Modular Design

Additional Technical Skills: Debugging & Troubleshooting, Production Support, Program Deployment, Deployment & Release Management, Automation Scripting, GenAI-assisted Development

WORK EXPERIENCE

Senior Software Engineer — Tata Elxsi, Thiruvananthapuram

November 2021 – Present

Career progression: Associate Engineer → Engineer → Senior Engineer

- Design and build scalable, high-performance backend applications using Python (3.8–3.13) and .NET (C#, .NET Framework 4.5–4.8, .NET Core 3.1, .NET 6) with FastAPI and ASP.NET for enterprise product solutions.
- Architect and implement RESTful services, microservices, and Windows Services, deploying via IIS, Docker containers, and AWS (ECS, EC2, Lambda, S3); work extensively with MySQL and MongoDB for data persistence.
- Serve as the go-to engineer for production support, independently diagnosing and resolving critical, high-impact issues across customer production, QA, and development environments to maintain delivery stability.
- Lead CI/CD automation using Jenkins, including Docker image builds and microservice deployment pipelines, alongside AWS infrastructure setup and on-premise deployments (server rack setup, network configuration) across Linux and Windows.
- Apply GenAI tools and custom automation scripts to streamline development, testing, documentation, and deployment workflows, reducing manual effort and shortening delivery cycle time.
- Apply strong understanding of SDLC, system design, and multi-tenant architecture to deliver clean, modular, and reusable code across projects.
- Independently design and implement automation workflows and architectural improvements, introducing standardized, performance-driven patterns that increase team efficiency.

EDUCATION

Diploma in Computer Engineering

Central Polytechnic College, Thiruvananthapuram, India | 2021
